

The World's Most Widely Deployed Technology for Processing Real-time Voice and Video over IP

Your best choice: go global

GIPS is global by any measure — by deployments — by platform — and by type of network impairment resolved. Global means world-class. It means right-sized function sets delivered at the right level of integration with the right interfaces. It means standards-based performance, deployed millions of times by proven industry leaders. It means more highly differentiated products brought to market faster at reduced cost with the right functionality. It means higher returns on investment, faster product innovation, lower customer churn, and sustained competitive advantage. Only GIPS gives you this global advantage.

GIPS media engines and frameworks have been downloaded over 800 million times. GIPS technology resolves the full range of network impairments — like packet delay, jitter, packet loss, and acoustic and network echo. That's why virtually every commercial packet-based real-time network communications device, software application and service leverages GIPS.

Partner with the experts

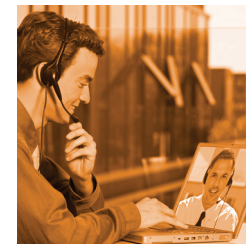

Global IP Solutions' customers license SDKs, MediaEngines or media processing components. And by integrating GIPS software into virtually any device, application or service, our customers have access to our world-class media processing experts. We work directly with developers to accelerate technology deployment of the best-of-breed, real-time media processing capabilities over IP.

More choices = faster deployments

GIPS' solution architecture is multi-tiered — so customers get to market faster with the right combination of features and performance.

- Tier-1 consists of quality-enhancing components (e.g., NetEQ) designed to mitigate a range of network impairments.
- Tier-2 consists of codecs to support various network environments and performance criteria.
- Tier-3 consists of MediaEngines — each designed to power voice or video communications platform while leveraging GIPS' quality-enhancing components for unrivaled performance.

Validated by proven industry leaders

Market leaders rely on us to deliver the performance and features critical to their reputations. They include:

- Nortel Networks
- Citrix GoToMeeting
- Yahoo!
- Oracle
- Cisco/WebEx Communications
- IBM
- Texas Instruments
